

## **Citroen C3**

### **All models with ABS**

#### **ABS control lamp illuminates.**

If there are complaints with these vehicles that the ABS control lamp illuminates, this could be caused by soiling on the magnetic track of the wheel bearing. A fault entry for the ABS sensor right and/or left is stored in the fault memory. To eliminate the fault, the magnetic track must be cleaned. To do this, proceed as follows:

- Remove the front ABS sensor.
- Use a soft cloth to clean the magnetic track on the wheel bearing through the ABS-sensor mounting hole.
- Refit the ABS sensor.
- Depending on the entry in the fault memory, clean the other side as well.
- Delete the fault memory.
- Carry out a test drive and make sure the ABS control lamp does not illuminate again.
