

## **Land Rover**

**Defender model year: 06/1998 - 2004**

**Discovery II model year: 01/1999 - 2004**

**With diesel engine: Td5**

### **Engine warning light illuminates / no engine throttle response**

If the engine warning light illuminates on the above vehicles when driving, and if there is no throttle response, this may be due to a faulty plug-connection for the accelerator pedal sensor on the accelerator pedal (see picture). Firstly, a check should be made as to whether the sensor connector is truly locked into place, and cannot be removed. If the problem is still present even after checking the plug-connection, the fuses should be checked, and the accelerator pedal sensor should be checked with the aid of a circuit diagram.
