

## **Mercedes Benz Vito (638) All models with ABS/ASR**

### **Control lamp for ASR illuminates, stoplights do not work.**

If there are complaints with these vehicles that the control lamp for the ASR system illuminates and that the stoplights have failed, one possible cause is a blown fuse. The fault code [Stoplight switch □ Interruption of electrical circuit□ may be stored in the fault memory of the ABS/ASR control unit. In order to eliminate the fault, the fuse for the stoplight switch must be tested and, if necessary, replaced. The fuse is located in slot 5 of the fuse box on the steering column (vehicle-specific details must be observed).
