

Opel

Astra H

Model year: 2004 to 2005

With engine: Z14XEP, Z16XEP, Z18XE

Vehicles with automatic air conditioning

Compressor noises

Externally-controlled compressors are used in the case of the above-mentioned vehicles. Here, if there are complaints with regard to noises that occur at an engine speed of 1,500 □ 2,000 revolutions per minute, it may be possible to eliminate these noises through a software update.

Before replacing the compressor, it is essential that the software status of the air-conditioning-system control is checked and, possibly, updated. In relation to this, it is helpful to contact an authorized dealer.
