

## **Opel Corsa B, Combo, Tigra 1995 – 2000 models With 1.4l + 1.6l petrol engine – 1.5l + 1.7l diesel engine**

### **Temperature gauge in red zone.**

If there are complaints about the above-mentioned fault, a possible cause could be a loss of coolant in the area of the thermostich on the radiator. The loss of coolant can be detected by drops of water on the thermostich or a dried up trace of water on the radiator.

To remedy the fault, the copper sealing ring of the thermostich must be replaced by a metal ring with a rubber insert.
