

Peugeot 206 **All models**

Airbag control lamp flashes or illuminates permanently.

If there are complaints with the above vehicles that the airbag control lamp flashes or illuminates permanently after using the cut-out switch for the passenger airbag, two possible causes should be considered:

1. Airbag control lamp illuminates permanently
Passenger airbag was deactivated using the cut-out switch.
2. Airbag control lamp flashes Failure of the cut-out switch.

If the airbag control lamp is flashing, no fault is stored in the fault memory. In order to eliminate the fault, the cut-out switch for the passenger airbag must be replaced.

Note:

From production number (last figures of the vehicle identification number) 8215XX, a modified cut-out switch for the passenger airbag was fitted during series production.
